

Product Operations Guide and Known Issues

Document ID: PP-OPS-002

Version: 2

Status: CURRENT

[SYNTHETIC FIXTURE - not the real assessment pack]

1. Platform Overview

ParcelPilot provides booking, dispatch, live tracking and proof-of-delivery for business logistics customers.

2. Tracking and ETA Behaviour

Driver devices report GPS position every 30 seconds in urban areas and every 2 minutes on rural routes. Estimated arrival times are recalculated on each ping.

3. Webhooks and Integrations

Events include order.booked, pickup.completed and delivery.completed. Consumers must deduplicate on the event_id field; retries may occasionally deliver an event more than once.

4. Known Issues Register

KB-2025-011 (OPEN): ETA jitter on rural routes caused by GPS drift. ETAs may swing by up to 45 minutes between updates. Workaround: refresh the tracking view or use the dispatch console for a stable ETA. Affects Standard, Express and Cold Chain services on rural legs.

KB-2025-007 (MONITORING): Duplicate webhook deliveries under retry storms after platform incidents. Consumers must deduplicate on event_id.

KB-2024-102 (RESOLVED in v2.9.1): Cold-chain sensor lag caused delayed temperature alerts.
